Subject: Use of Ipe (Ironwood) South American Hardwood for Roof Decks

Dear Ms. Martin:

I have reviewed the technical data you sent me regarding Ipe (Ironwood), a sustainable South American hardwood. You have requested that this material be allowed for use in rooftop decks in lieu of a fire-retardant treated wood or all-heart redwood as required by Section 1511.5 of the San Francisco Building Code (SFBC). Based on the data produced by the USDA Forest Service Forest Products Laboratory and the ASTM E-84 test data from Shimel and Son Testing Laboratories, Inc., I find that Ipe (Ironwood) meets the intent of the SFBC for rooftop decks.

Originally, roof decks were considered to be similar to roof coverings such as shakes and shingles. The redwood was even tested under a standard roof covering fire ignition test. Current intent regards a roof deck as a separate roof structure constructed atop a fire-retardant roof covering of Class B or better. The ASTM E-84 Surface Burning Characteristics Test (Steiner Tunnel Test) performed on this material shows that it is equivalent to a Class I material. This rating, and Ipe's natural resistance to decay fungi or insect attack and its weathering characteristics, allows its installation as equivalent to the requirements of the SFBC.

The roof deck must comply with the requirements of Section 1511.5, and since Ipe is a combustible material, it must be installed in accordance with the requirements of other code sections, such as maintaining a clear distance of three feet from the property line for R-3 Occupancies.

If you have any questions, please call Alan Tokugawa, Code Analyst, at (415) 558-6004.

Very Truly Yours,

Laurence Kornfield, CBO  
Chief Building Inspector  
Technical Services Division
Dear Applicant:

Enclosed is a final official signed copy of MEA acceptance of your product(s).

This document together with proper labeling and installation in accordance with New York City Building Code will enable the inspector to know that the product(s) installed is (are) legal.

All shipments and deliveries of accepted materials to the job site are required to be labeled or tagged in accordance with the format below:

accepted for use
City of New York
Department of Buildings

CITY OF NEW YORK
DEPARTMENT OF BUILDINGS

Pursuant to Administrative Code Section 27-131, the following equipment or material has been found acceptable for use in accordance with the Report of Materials and Equipment Acceptance (MEA) Division.

MEA 220-01-M
Report of Material and Equipment Acceptance Division
Manufacturer - Timber Holding, Ltd., 2400 West Cornell Street, Milwaukee, Wisconsin 53209.
Trade Name - Ironwood.
Product - Naturally fire retardant wood.
Pertinent Code Section(s) - 27-328.
Test(s) - RS 5-5 (ASTM E84).
Laboratory - Shimel and Sor Testing Laboratories, Inc.
Description - Naturally fire retardant wood identified as "Tabebui SPP" was tested in Shimel and Sor Testing Laboratories, Inc. for the following:

Strength Properties: ASTM-D143
Surface Burning Characteristics: ASTM-E84
Specific Gravity and Unit Weight: ASTM-D143

TEST RESULTS

1. Physical Properties

<table>
<thead>
<tr>
<th>Property</th>

Note: Toxicity test was not performed.

Recommendation - That the above described naturally fire retardant wood be accepted as complying with the requirements of Code Section 27-328 as fire retardant wood with a flame spread rating of 25 or less, classification of "A", with a smoke developed rating of 25 or less, for outdoor installation, under the following conditions:

1. Use of described materials shall be in conformance with Code Section 27-328 and the additional Code Sections covering the specific intended use.

2. The materials shall bear the identification of a testing laboratory or agency certifying to conformance with the production and performance requirements enumerated in the prescribed Code Reference Standard.

3. The acceptance of these materials is limited to combustible classification in accordance with flame spread and smoke developed only but does not include fire resistance rating. Structural and other requirements shall be in compliance with code provisions applicable to the specific application.

4. All shipments and deliveries of such materials shall be accompanied by a certificate or label, certifying that the materials shipped or delivered are equivalent to those tested and acceptable for use, as provided for in Article 27-131 of the Building Code.

Final Acceptance: Nov 26, 2001
